### Creating Stacked Barplot Dataframes for Visual Aid

```
partisan_trump <- x |> group_by(D8, NJ4) |> summarise(Count = n(), .groups = "drop") |> filter(D8 ==1|D
## DF for Trump Policy Bar amongst Republicans
R_trump <- partisan_trump |> filter(D8 ==1) |> mutate(Percentage = Count / sum(Count) * 100)
```

```
sum(unique(R_trump$Percentage)) ## checking for accuracy
## [1] 100
## DF for Trump Policy Bar amongst Democrats
D_trump <- partisan_trump |> filter(D8 ==2) |> mutate(Percentage = Count / sum(Count) * 100)
sum(unique(D_trump$Percentage)) ## checking for accuracy
## [1] 100
partisan_harris <- x |> group_by(D8, NJ5) |> summarise(Count = n(), .groups = "drop")
R_harris <- partisan_harris |> filter(D8 ==1) |> mutate(Percentage = Count / sum(Count) * 100)
sum(unique(R_harris$Percentage)) ## checking for accuracy
## [1] 100
D_harris <- partisan_harris |> filter(D8 ==2) |> mutate(Percentage = Count / sum(Count) * 100)
sum(unique(D_harris$Percentage)) ## checking for accuracy
## [1] 100
all_american_trump <- x |> group_by(NJ4) |> summarise(Count = n(), .groups = "drop") %>%
  mutate(Percentage = Count / sum(Count) * 100) ## Use to plot horizontal barchart
all_american_harris <- x |> group_by(NJ5) |> summarise(Count = n(), .groups = "drop") %>%
  mutate(Percentage = Count / sum(Count) * 100) ## Use to plot horizontal barchart
## If all dataframes are accurate, then the value 100 should be printed 4 times
```

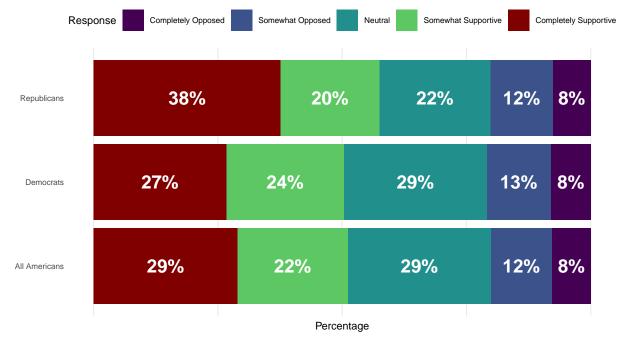

### Reorganizing these Dataframes for Subsequent Plots

### Plotting Trump Policy

```
ggplot(stacked_data, aes(x = Group, y = Percentage, fill = NJ4)) +
  geom_bar(stat = "identity", position = "stack") +
  geom_text(aes(label = paste0(round(Percentage, 0), "%")),
           position = position_stack(vjust = 0.5), # Center labels within each section
                       # Adjust text size
            color = "white", # White text for better contrast
           fontface = "bold") + # Make the labels bold+
  # Formatting
  coord flip() + # Makes the bar horizontal
  scale_fill_manual(values = c("Completely Opposed" = "#440154FF",
                                "Somewhat Opposed" = "#3B528BFF",
                                "Neutral" = "#21908CFF",
                                "Somewhat Supportive" = "#5DC863FF",
                                "Completely Supportive" = "#800000")) +
 labs(
   title = "American Opinions on Trump's Proposed Social Security Plan \n",
    subtitle = "How do you feel about plans to eliminate the partial income taxation of Social Security
couples)?
\n",
   x = "",
   y = "Percentage",
   fill = "Response"
  theme_minimal(base_size = 8) +
  theme(
   plot.title = element_text(hjust = 0.5),
   plot.subtitle=element_text(hjust = 0.5),
   panel.grid.major.y = element_blank(), # Remove y-axis grid lines
   panel.grid.minor = element_blank(),
   axis.text.x = element_blank(), # Remove x-axis text (since groups are already labeled)
   axis.ticks.x = element_blank(),
   legend.position = "top" # Move legend to top
```

### American Opinions on Trump's Proposed Social Security Plan

How do you feel about plans to eliminate the partial income taxation of Social Security benefits for seniors earning more th 34,000 USD annually (or 44,000 USD total for married couples)?

```
ggsave("descriptive_trump.png", width = 7, height = 5, dpi = 600)
```

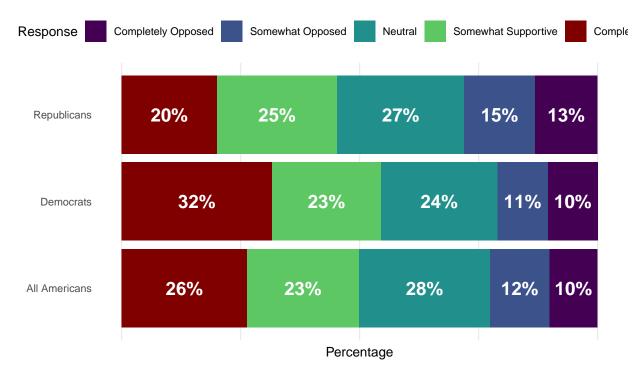

### Organizing Data for Harris

##Plotting Harris

```
ggplot(stacked_data, aes(x = Group, y = Percentage, fill = NJ5)) +
  geom_bar(stat = "identity", position = "stack") +
  geom_text(aes(label = paste0(round(Percentage, 0), "%")),
            position = position_stack(vjust = 0.5), # Center labels within each section
            size = 5,  # Adjust text size
            color = "white", # White text for better contrast
           fontface = "bold") + # Make the labels bold+
  # Formatting
  coord flip() + # Makes the bar horizontal
  scale_fill_manual(values = c("Completely Opposed" = "#440154FF",

### Exporting multinomial regression to word

```
# Create a flextable for Word export
flex_table <- flextable(results_table) %>%
    theme_vanilla() %>% # Clean professional styling
    autofit()

# Save table to a Word document
doc <- read_docx() %>% # Create a new Word document
    body_add_flextable(flex_table) %>%
    body_add_par(" ") # Add space after the table

print(doc, target = "Multinomial_Regression_Results.docx")

# Show the table in RStudio
flex_table
```

## Warning: fonts used in 'flextable' are ignored because the 'pdflatex' engine is
## used and not 'xelatex' or 'lualatex'. You can avoid this warning by using the
## 'set\_flextable\_defaults(fonts\_ignore=TRUE)' command or use a compatible engine
## by defining 'latex\_engine: xelatex' in the YAML header of the R Markdown
## document.
